Platform Lifts

HI-RISE LIFT

The Dalby Glide Hi-Rise platform lift is British built and complies to the Machinery Directive and part M-Building regulations.

Using the ultra reliable and low maintenance self sustained nut and screw drive the Glide can be specified with up to 6 stops and a lifting height of 10M.

The modular design of the Glide Hi-Rise platform lift allows the lift to be configured with a wide range of enclosure and door configurations to suit even the most awkward sites.

A wide range of colours and enclosure options including half height gate, fully glazed or external package ensures that the Glide Hi-Rise will discretely blend into the surrounding building. With platform illumination and emergency lowering both battery backed the Glide provides a worry free solution to your access requirements.

Platform Lifts

HI-LINE LIFT

The Dalby Glide Hi-Line platform lift brings an 'elevator' feel to a platform lift for only a fraction of the cost.

Fully complying with building regs 2000 part M, ISO 9386-1 and CE marked, this latest addition to the Glide range is based on the popular Hi-Rise platform lift but features a full mirrored cab back wall with LED Hi-Line lighting and illuminated control panel.

The Glide Hi-Line platform lift can be specified with a variety of options including visual annunciation, audible annunciation and powered doors. This gives all the benefits of a moving carriage lift with the ease of installation and maintenance of a platform lift. With platform illumination and emergency lowering both battery backed the Glide provides a worry free solution to your access requirements.
